

Trade Fair Calendar 2020

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, or by increasing the productivity of the land that is already being used.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by improving the way that food is stored and distributed, or by changing the way that people eat.

There are many other ways to meet this demand, and it is important that we find ways to do so that do not harm the environment or the world's food supply.

One of the most important things we can do is to make sure that we have enough food to eat. This means that we need to make sure that we have enough land for agriculture, and that we have enough water to grow crops.

We also need to make sure that we have enough food to eat that is healthy and nutritious. This means that we need to make sure that we have enough food that is safe to eat, and that we have enough food that is good for us.

There are many other things that we can do to make sure that we have enough food to eat, and it is important that we do so. This is because food is one of the most basic needs that we have, and it is something that we need to live.

So, let's make sure that we have enough food to eat. This means that we need to make sure that we have enough land for agriculture, and that we have enough water to grow crops.
